

POWER PAGES

Create low-code and secure business websites

Microsoft Power Pages is the fifth product in the Power Platform family. This low-code solution is aimed at business users, IT professionals and programmers from large organizations in all industries and allows you to create low-code externally oriented websites with business data, hosted on a secure platform, in a quick and easy way.

Create captivating website experiences

Community services

Create sites for services such as authorizations, licenses, grant applications and outage reports.

FAQ's

Create FAQ pages about products, services, policies and procedures.

Customized management for clients

Develop websites that offer 24/7 support for services such as warranty registration, support inquiries and appointments.

Partner operations

Support partners, create portals for on-boarding, sustainability monitoring and supplier support.

Build with advanced development tools

Edit page code

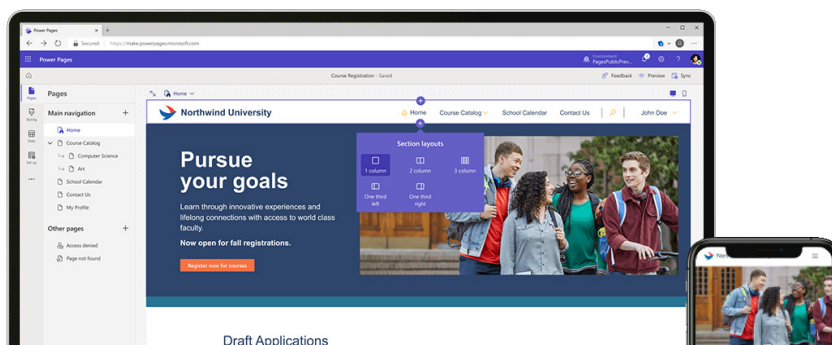

View the underlying HTML of the page and make changes directly to the code through the code editor embedded in Design Studio.

Advanced tools

Enable advanced capabilities through Visual Studio Code and interact with business data using JavaScript, Liquid models, and Web APIs.

Optimize your implementations

Create deployment profiles and automate application life-cycle management workflows with GitHub and Azure DevOps.

Discover the main features of Microsoft Power Pages

Create in the Design Studio

Create ready-to-use templates or design customizable experiences. Compile pages with text, video, images, forms and lists of business data.

Create with the Template Center

Work with feature-rich models that include sample data; quickly create websites for scheduling, registering and submitting applications.

Ensure security and governance

Help protect your site's content and data with role-based access controls and the security and compliance that Microsoft Azure provides.

Get help in the Learning Center

Explore guides, tutorials, and videos on creating websites, configuring pages, working with code components, modeling, and visualizing business data.

Create with professional tools

Add more advanced functionality and capabilities to websites with tools like Visual Studio Code, GitHub and Azure DevOps.

Simple implementation and unified management

Protect yourself from vulnerabilities

Simple authentication

Keep the whole organization organized

Make learning simpler and more useful
